PARISIIS.
LUC. BUQUET
52. RUE ST. PLACIDE.

Tradimus hodie in manus omnibus eis, qui coleopterologica studia colunt amantve, catalogi coleopterorum Europae, qui novissime in lucem prodiit ante hos sex annos, i. e. anno 1877, novam editionem. Plurima fuerunt, quae addere, ampliare, delere, denique novare oporteret: multum enim atque a multis cum semper, tum his sex annis in illis studiis sudatum est, multa recens detecta, plura ordinata, disposita.

Ita factum est, ut a nobis quoque, cum hunc catalogum conscriberemus, quaedam novarentur. Novatum est praeter caetera in familiarum dispositione. Quae enim familiae naturali quadam cognatione inter se contineri viderentur, eas in singulas quasi tribus congregavimus. Nova his sodaliciis nomina imponere non placuit. Nomina utique abunde sunt. Linea tamen brevis et obesior in quovis termino metam faciet.

Alterum, quod praefari oportet, est de Faunae nostrae finibus. Atque in universum quidem hic libellus eisdem finibus se continet, quibus, qui eum antecessit. Transcaucasicas tamen et Lenkoranenses regiones assumptas videbis. Quae provinciae, ut hodie res se habet, separari ac disjungi ab eis provinciis, quae citra sunt, vix et ne vix quidem possunt; quando, si quid insectorum ad hunc diem ex illis longinquis locis accepimus, confusum plerumque et inseparatum venit atque ita, ut accuratior patriae perscriptio deesset.

Abbreviaturis eorum vocabulorum, quae patriam significant, eisdem usi sumus, quibus antea. Factum tamen est hic illic compendii gratia, ut universalis quaedam patriae significatio pro pluribus specialibus poneretur, etiamsi, de qua bestiola agebatur, illius zonae non omnem locum incolere videretur. Ita leges saepe E. md., E. b., E. m. etc. Perinde compendium fecit, quod nonnunquam continuationem locorum, quibus species aliqua reperta esset, a tergo eorum vocabulorum poneremus, quibus illius ipsius speciei synonyma et varietates continerentur.

Quod restat, haec volumus lector observes. Quae vocabula a capite lineae reduximus, synonyma esse scito. Litera v, cum vocabulum aliquod antecedit, varietatem significat, litera m monstrositatem. Si quo loco signum × reperies, est illa species ex eis, de quibus, rene vera Europam incolant, ambigitur. Advenas etiam et hospites sic significavimus, qui, cum navibus in Europam advenissent, sedem apud nos ceperunt et quibusdam locis colliguntur.

Caeterum in hoc libro non unam manum inesse, ipse titulus profitetur. Et genera Carnivora quidem (Cicindelidas — Gyrinidas) et Heteromera (Tenebrionidas — Pythidas) *vvn Heyden* conscripsit; Staphylinidas Dr. *Eppelsheim.* Eam partem catalogi, quae est a Pselaphidis usque ad Cioidas, *E. Reitter* confecit. In Cerambycidas *Ganglbauer*, in Curculionidas etc., Chrysomelidas, Coccinellidas *J. Weise* operam suam et studia contulerunt.

Viro illustrissimo, Dr. *Kraatz*, gratias agimus plurimas ideo, quod studia nostra offerendis ex bibliotheca sua libris ea, qua assolet, liberalitate juvare voluit.

Auctores.

Abbreviaturae, quibus insignificanda patria usi sumus, hae sunt:
